

Alfredo Arvelaez

Cloud / DevOps Engineer

alfredoprograma.dev@gmail.com · alfredoprograma.dev · linkedin.com/in/alfredoprograma · github.com/AlfredoPrograma

PROFILE

Cloud / DevOps Engineer with nearly four years operating cloud native systems in production. Specialized in multi-cloud architecture centered on AWS, containerized workloads with Docker and Kubernetes, and the CI/CD automation that ships them. I design, automate, and operate cloud infrastructure to keep production systems reliable.

PROFESSIONAL EXPERIENCE

Cloud Engineer / DevOps · Magnet.cl

Oct 2022 — Present

- Designed a greenfield three-tier product on AWS, provisioned with Terraform across development, staging and production: frontend, API and asynchronous BullMQ workers as ECS Fargate services behind an ALB, backed by RDS Postgres and ElastiCache Redis.
- Isolated the network per environment, with services in private subnets reaching out through NAT egress, RDS Postgres and ElastiCache Redis held in private isolated subnets, and internal AWS traffic kept on VPC endpoints.
- Established a site-to-site VPN linking AWS workloads to a client's on-premises Palo Alto firewall, then diagnosed a BGP session failure that left both tunnels up but no routes advertised, tracing it through the tunnel logs with the client's network team to correct the peering configuration on their side.
- Eliminated static AWS credentials from CI by building a GitHub Actions pipeline on OIDC role assumption, scoped per repo and branch, that ships a merge to a running ECS task in around 8 minutes. Development and staging on merge, production gated behind a tagged release.
- Provisioned Azure AI Foundry model deployments for AI backed application features, standing up both DeepSeek and GPT family models, configuring each deployment and raising its assigned quota so serving throughput kept pace with what the applications demanded.
- Hardened Debian and Ubuntu servers for production HTTP and HTTPS workloads, restricting SSH access, adding fail2ban for brute force mitigation, tuning an nginx reverse proxy and issuing TLS certificates through Let's Encrypt with certbot.

Full Stack Developer · Ingeniust

Feb 2022 — Oct 2022

- Implemented an inventory management module within a web based ERP system, enhancing transaction traceability and stock control for over 150 products, improving operational efficiency and audit readiness.
- Designed and built the backend of a transaction heavy web platform using Golang and PostgreSQL, implementing complex business logic and transaction processing, and supporting a React based frontend with reliable APIs for data analysis and reporting.

Software Development Tutor · Classgap

Oct 2021 — Feb 2022

- Prepared over 30 students for online university projects and exams, resulting in improved academic performance and successful course completion.
- Mentored junior and inexperienced developers by resolving technical questions and accelerating their learning and problem solving skills.
- Earned 40 top rated reviews on the platform, demonstrating consistently high learner satisfaction and teaching effectiveness.

TECH STACK

Cloud: AWS · Microsoft Azure · Google Cloud Platform

Infrastructure as code: Terraform · AWS CDK

Containers: Docker · Kubernetes · Amazon ECS · Amazon EKS

CI/CD: GitHub Actions · Jenkins · Bitbucket Pipelines

Observability: Amazon CloudWatch · Grafana · Prometheus

Languages: Go · Python · TypeScript · Bash

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate** — Amazon Web Services

Jul 2025 – Jul 2028
- **AWS Certified Cloud Practitioner** — Amazon Web Services

Jan 2025 – Jul 2028
- **Kubernetes and Cloud Native Associate (KCNA)** — Cloud Native Computing Foundation

Sep 2025 – Sep 2027
